

1. Primary Schema Generation Prompt

Context: You are generating a JSON Schema for a new shipment-related event. The developer has provided the event requirements in: bob_inputs/new_schema_request.md
The existing schema pattern is in: data/schemas/shipment_event_schema.json

Task: Generate a complete JSON Schema for the event described in new_schema_request.md.

Instructions:

- Read and understand the event description, business rules, required fields, optional fields, constraints, and example payload in new_schema_request.md.
- Use shipment_event_schema.json as the structural and naming convention reference.
- Follow JSON Schema Draft 2020-12 structure.
- Use "type": "object" as the root.
- Use "properties" for all fields.
- Use "required" for required fields.
- Use "string" for text fields.
- Use "string" + "format": "date-time" for timestamps.
- Use "number" for numeric fields.
- Use "object" for nested objects.
- Include nested "properties" and "required" blocks for objects.
- Only include fields explicitly described in new_schema_request.md.

Constraints:

- Output **only** valid JSON Schema.
- Do not include explanations, comments, or prose.
- Do not invent fields.
- Do not include compatibility notes or versioning strategy.

Output Format: A single JSON object representing the final JSON Schema.

2. Schema Explanation Prompt

Context: You have just generated a JSON Schema for a new event.

Task: Explain the schema in clear, structured Markdown.

Instructions:

- Provide a section for each top-level field.
- Describe required vs optional fields.
- Describe constraints, enumerations, and nested objects.
- Explain the rationale behind each major design choice.
- Reference field names exactly as they appear in the schema.

Constraints:

- Do not repeat the JSON Schema.
- Do not include compatibility notes.
- Do not include versioning strategy.
- Output only Markdown.

Output Format: A Markdown document suitable for developers.

3. Documentation & PR Summary Prompt

Context: Developers need documentation and a PR summary for the newly generated schema.

Task: Produce two Markdown sections:

1. Developer Documentation
2. PR Summary

Instructions: Section 1 — Developer Documentation

- Describe the event purpose.
- Provide example payloads.
- Provide usage notes.
- Provide integration guidance.

Section 2 — PR Summary

- Summarize the schema purpose.
- List major fields.
- List required vs optional fields.
- Include one example payload.

Constraints:

- Do not repeat the JSON Schema.
- Do not include compatibility notes.
- Do not include versioning strategy.
- Output only Markdown.

Output Format: A Markdown document containing both sections.
